DATA VISUALIZATION AND STORYTELLING

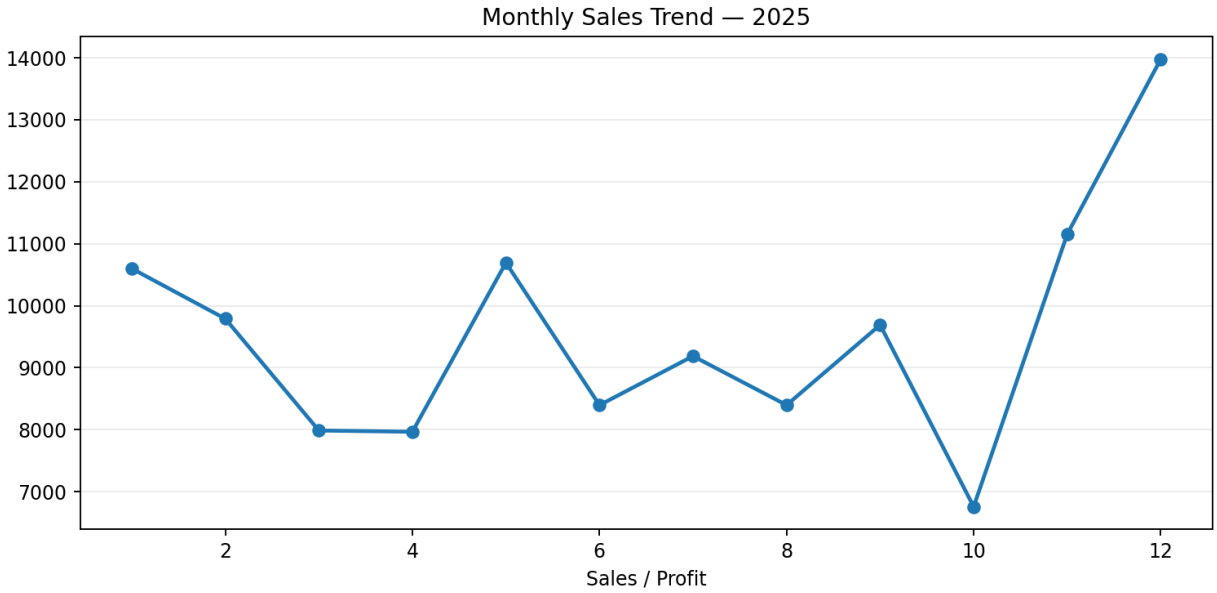

Data Analyst Internship — Task 2
Prepared by: Burhan Khurshid

Total Sales	Total Profit	Orders	Average / Order
114,590	**19,953**	**240**	**477**

Executive story

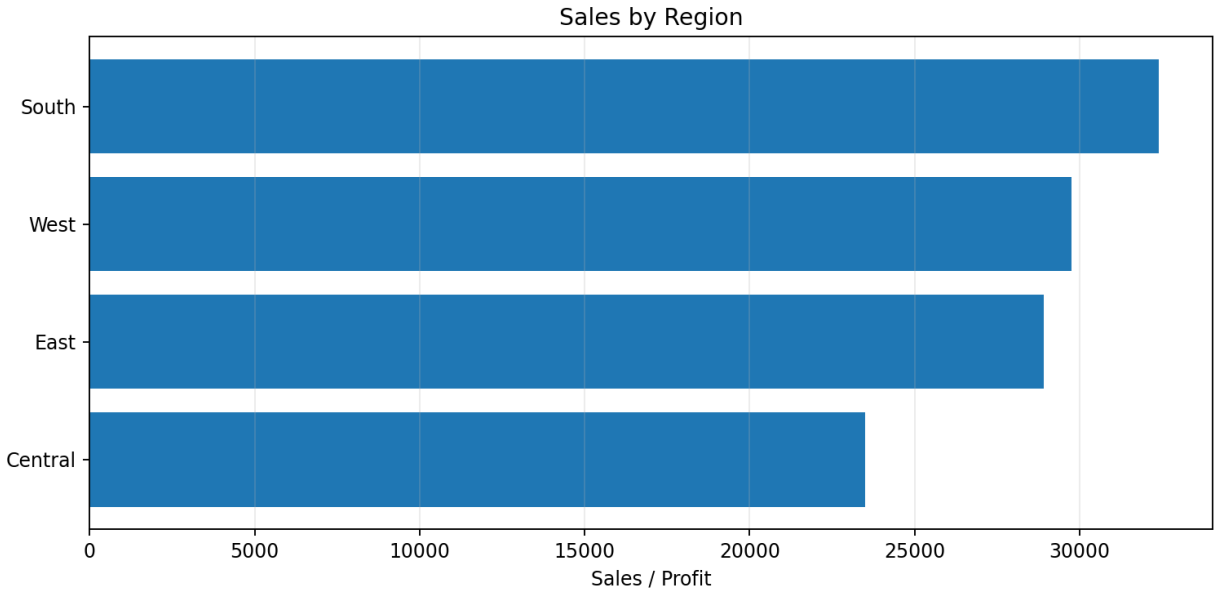

This practice dataset contains 240 sales orders in 2025. Total sales are 114,590.50 and total profit is 19,952.94. South is the highest-sales region, Technology leads category sales, and month 12 is the strongest month. These comparisons show where revenue is concentrated and when sales peak.

1. Monthly sales trend

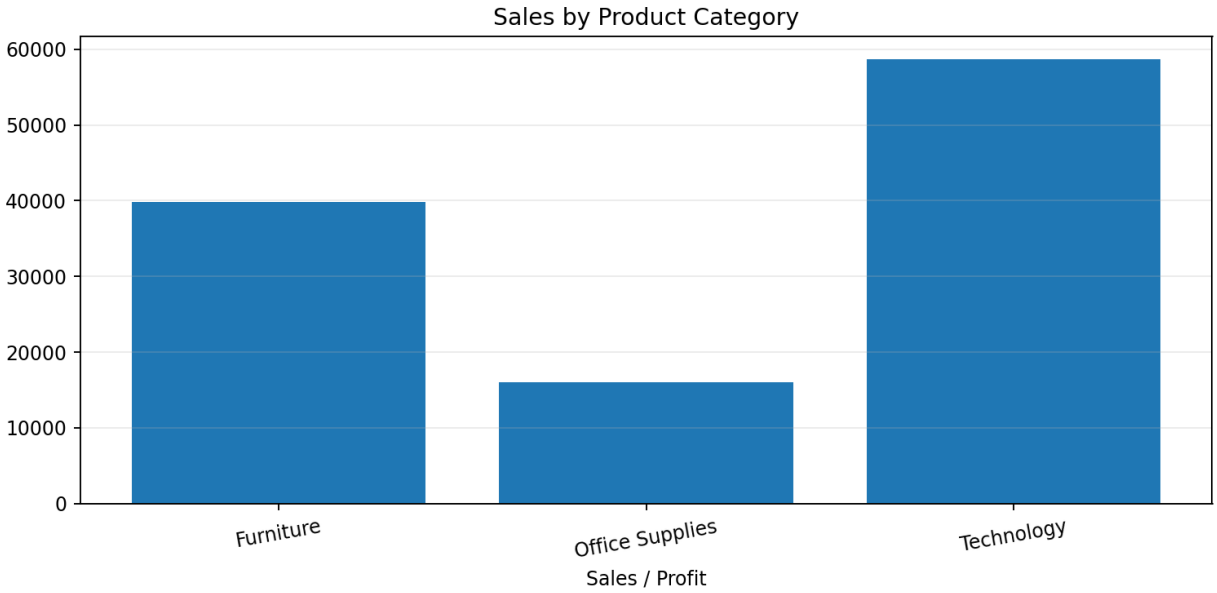

Month 12 has the highest sales in this generated sample. A line chart makes movement through the year easy to follow.

2. Regional performance

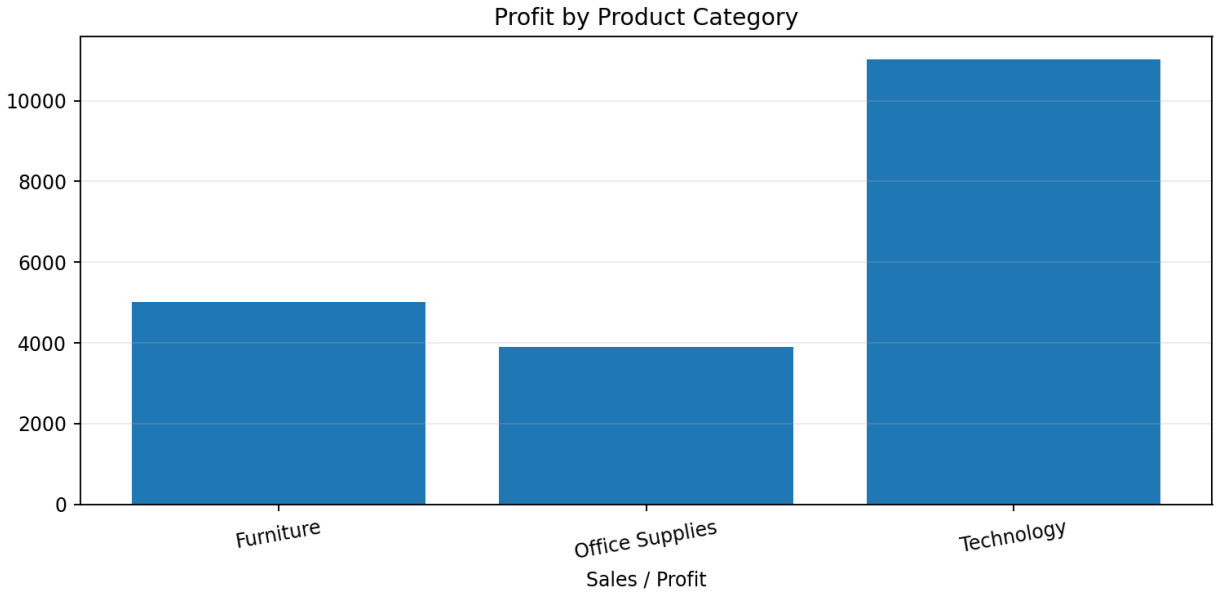

South leads regional sales with 32,402.40. Compare profit as well as sales before making decisions.

3. Category sales

Technology contributes the highest category sales (58,712.22). Revenue alone does not show profitability.

4. Profit by category

Profit can differ from sales: a category with high revenue is not automatically the most profitable.

Recommendations

• Study the leading region to understand its product mix and customer demand.
• Review the strongest month for possible seasonal patterns.
• Compare category profit with category sales before allocating stock or promotional budgets.
• Monitor these measures monthly.

Method and limitations

Generated practice dataset of 240 orders in 2025; not the official Kaggle Superstore data. Currency is unspecified. Charts are descriptive and do not establish causation. Tools: Python, Pandas and Matplotlib.
